

# CAB HARDWARE AND INSULATION MATERIALS

## CAB DOOR HANDLES

Model No.	Description:
20062-1/2	Non Locking Handle Steel shank 5/16" square 3" long. Chromium-plated.
G-2	Rubber Gasket

For RUBBER GASKET Order #G-2

Model No.	Description:
GD-303	Locking "L" Handle
G-2	Rubber Gasket

Model No.	Description:
07107	RH Interior Door Lock
07108	LH Interior Door Lock

# CAB DOOR HANDLES

**Model No. Description:**

- 07101 Non Locking Offset T Handle (Zinc)
- Steel Construction
- 360° Rotation
- shaft Length 3"
- 5/6" Square Shaft
- Mounting Holes 1 9/32" C to C
- Zinc Finish

**Model No. Description:**

- 5619A Paddle Latch Strike With Slotted Holes
- Has a long primary and a shorted secondary catch
- No Holes
- Plain Steel
- For use with single point paddle latches**

# SEALING MATERIALS

**07135** Cowling-Fuel tank weather strip (Hollow foam tubing) 6 ft. lengths- priced per foot. (Also includes rubber trim seal to go over the metal edge of cab).

**07141** Sold per foot, Door Flange weather strip.

## Cab Insulation Materials

### Quieter Cabs Can Prevent Hearing Loss

**1" Sound Foam with Perforated Vinyl Surface (07601-Black) | 07602-Beige**  
**1/2" Sound Foam with Perforated Vinyl Surface (07604-Black) | (07605-Beige)**  
 Sound absorption foam. Attractive finished appearance makes this product particularly suitable for vehicle headliners and side panels. Sold Per Lineal Inch **54" Wide**

**1 1/4" Barrier/Absorption/Vinyl Covered (07612-Beige)**  
 1 lb per square foot loaded vinyl barrier is added to 07601, 07602, 07603 absorption material to reduce low frequency noise. Same application as 07601, 07602, 07603 where exterior noise requires a barrier, like when an engine is on the other side of the wall.  
**24" x 54" Sheets**

**1" Underside of Engine Hoods (07621-Mylar) (Reflective Foil)**  
 1" Thick absorption sound foam with cover to prevent contamination of foam. The 07621 with mylar is recommended for use where abrasion resistance and reflectivity are desired. The reflective, impervious wipe-clean surface protects against liquids, oils, water, and many chemical substances. Use in engine compartment, around hydraulics, etc.  
**Sold Per Lineal Inch 54" Wide**

**5/16" Under Floor Mat Barrier (07641-Black)**  
 1 lb per square foot loaded vinyl barrier material with 1/4" thick foam backing. Used to add a low frequency noise barrier under floor mat material 07661, 07662, or 07663. Also to add a barrier to firewall area inside of cab.  
**Sold Per Lineal Inch 54" Wide**

**1/2" Composite Barrier Floor Mat (07652-Black)**  
 Black twist grain wear surface on 1 lb per square foot loaded vinyl barrier with 3/8" thick closed cell sponge backing. Will not absorb water or other liquids. Excellent traction tread.  
**Sold Per Lineal Inch 54" Wide**

# Cab Insulation Materials

## Quieter Cabs Can Prevent Hearing Loss

<b>1/2" Floormat (07661-36" wide)   (07662-48" Wide)   (07663-60" Wide)</b> Black vinyl round ribbed floormat with 3/8" thick closed cell sponge backing. Will not absorb water or other liquids. Easy to clean. Ribs run lengthwise on material. <b>Sold Per Lineal Inch 36" 48" 60" Wide</b>	
<b>07671 -Mounting Plate</b> -For 1" thick Sound Foam Material #07601, 07602, and 07603	
<b>07681 Knob</b> - Black <b>07682 Knob</b> - Tan <b>07683 Knob</b> - Mojave Brown Screw Buttons for use with 07671 mounting plate	

Top of Cab / Side of Cab  
**07601 - 07602**  
 \* **07611 - 07612**

\* Use when Working  
 in High Noise Areas

**Boots**  
 Cover holes around seats, brakes,  
 clutch, and other openings

Engine Side of Firewall  
**07622**

Underside of Engine Hood  
**07621**

**07661 - 07662 - 07663** Floormat  
 with or without **07641**  
**07652** Floormat/Barrier

Spray Adhesive - 200° Temperature			
Part No.	Material Size	Can Size	How Sold
Probond	Covers Approximately 20 Sq. Ft.	15 3/4 Fluid Oz.	Per Can

# USE OF MATERIALS FOR NOISE CONTROL

**The purpose of this article is to discuss the practical uses of noise control materials. This discussion is separated into two categories: absorption materials and barrier materials.**

## **Sound Absorption Materials:**

Sound absorption materials are widely used to control the acoustic environment of an enclosed area by reducing the reflection (or bouncing back and forth) of sound waves.

The noise level reduction is dependant on the porous structure of the sound absorption material. Noise level reduction occurs when the vibrating air enters and passes through the porous material. Therefore, this porosity is responsible for the degree of absorption. The absorption is also dependant upon the thickness of the material.

Facings, as on 07601, 07602, 07603, 07611, 07612, 07621 and 07622 actually improve the absorption quality of the material without being as thick.

## **Sound Absorption In Cabs:**

When a diesel engine is enclosed, the sound emitted from the engine strikes the inside wall of the engine compartment and is partly absorbed and partly reflected. Because most common structural materials are massive with smooth solid surfaces, virtually all sound striking the surfaces will be reflected. Sound will then travel through the air inside the engine compartment and may be reflected several times more. The result of these multiple reflections is a significant increase in the level of sound within the engine compartment over the sound level with the engine compartment enclosure not present. The "reverberant" sound energy density builds up until the energy is being dissipated by absorption and by transmission through the compartment boundaries at the same rate that it is being added to the enclosed space. The net practical result of this is that the sound transmission loss of the engine compartment enclosure must provide not only for the reduction in radiation from the source which one wishes to obtain, but it must also provide for an additional noise reduction to account for the reverberant buildup of sound level within the engine compartment enclosure.

The above phenomena occurs inside of an untreated cab.

If the enclosure were lined with an acoustically absorptive material such that it were 100% absorptive on all inside surfaces, there would be no buildup of acoustical energy.

## **Barrier Materials:**

A barrier material is like a wall that blocks the sound from passing through it.

One of the most common mistakes made in the noise reduction field is the use of a sound absorption material as a sound barrier. Sound absorption materials usually make very poor barrier materials because of their porous nature. The ideal barrier has high density, is impervious (does not permit penetration), and is limp. Materials commonly used for barrier applications include heavily loaded plastic, lead sheet, steel sheet, concrete, gypsum board, rubber synthetics, and sheet asphalt.

The most effective noise control is to make the sources as quiet as possible. Once this has been done, the path(s) to the user (receiver) must be made as inefficient as possible.

A cab and/or engine compartment is intended to prevent sound from traveling from a source to a receiver and thus must be effective as a barrier to sound. It is assumed in the following discussion that a cab is being described such that the sound heard inside the cab has been transmitted through the walls of the cab from the outside and from the engine.

Perhaps the most important consideration for effective use of barrier materials is to obtain an excellent seal. This allows the barrier to work at its full capabilities. Noise will flow out wherever an air leak occurs, and a lot of noise can leak through a very small hole. To overcome the leakage problems, extreme attention to detail is required when applying barrier material. Barriers should be overlapped at the seams whenever possible and caulked or filled when overlapping not possible. When installing floormat and barrier materials around shift or steering levers, etc., a hole or slot must be cut in material which will allow noise to go through. A separate piece of floormat or barrier material should be placed around the levers that will move with them to prevent the noise from coming through the openings.

## **Composite Materials:**

Very few noise problems can be solved by just using an absorption material or a barrier material. More often, both absorption and barrier materials are required. Many of our noise control materials are a composite of both absorption materials and barrier materials.

In an engine compartment, as discussed before, the noise level builds up until the noise is being transmitted through the compartment walls at the same rate it is being created. Absorption will help to lower the noise level by lowering the build up of the noise caused by the bouncing back and forth of the noise. A lower noise level will not transmit as high a noise level into the cab or engine compartment. The barrier material can now do a much better job of blocking the noise from transmitting into the cab or out of the engine compartment.

## **Warranty:**

The test data and information in this bulletin are presented in good faith, and no representations or warranties, written or implied are made by Harold Electric as to such data and information. We disclaim any and all liabilities resulting from the use of the contents of this bulletin and cannot assume any guarantee against patent infringement, liabilities, or risks involved from the use of these products. No claim is made as to the sound level that may be obtained within an enclosure by the use of this material.

# THE INSULATOR

## High Performance Environment Control

Eliminates heat, cold, noise, and moisture. Easily installed.

Used on FLOORBOARDS • HEADLINER • DOOR PANELS • FIREWALLS • UNDERHOOD

- Shields up to 400° heat
- Effective cold barrier
- FAA & Coast Guard approved (Special Order)
- Fire Retardant
- Insulates against moisture
- Won't mold or mildew
- Cuts with household scissor
- Easily installed in minutes
- Lightweight material
- Conforms to Federal Motor Vehicle Safety Standard 302

INSULATOR™  
DUAL SIDE  
ALUMINUM FOIL  
Part No. 07695

Specifications	
<b>Product</b>	<b>Dual Side</b>
Weight	32 oz./sq. yd
Foil Thickness	.001 inch
Width of Material	48"
Performance	
Emittance	.03
Reflectivity	.97

### WHAT IS "THE INSULATOR?"

*The Insulator* is a multi-layer thermal-acoustic insulation material. It's unique composite design consists of high grade aluminum foil bonded by thermosetting resins to a multi-fabric padding.

*The Insulator* unique composite design makes *The Insulator* an effective: ❖ **RADIANT HEAT BARRIER**

❖ **THERMAL HEAT BARRIER**

❖ **VAPOR BARRIER**

❖ **CONSTRAINT LAYER DAMPING MATERIAL**

### HOW DOES "THE INSULATOR" WORK?

#### RADIANT HEAT BARRIER

Radiant heat is energy in the form of invisible infrared rays. It is the major source of heat transfer. In fact, radiation can account for 90% of all heat transferred through walls, floors, ceilings, and doors of automobiles, recreational vehicle, buildings, homes, boats, and airplanes.

Infrared rays are either transmitted through, absorbed into, or reflected by any material it contacts. Laboratory tests show that one sheet of aluminum reflects in excess of 97% of radiant heat. Therefore, a reflective insulation using aluminum foil reflects almost all of the heat back toward its source.

Since a reflective insulation material like *The Insulator* reflects heat, it protects against heat during the hot summer months and keeps heat in during cooler periods.

#### THERMAL HEAT BARRIER

*The Insulator* special fiber padding provides excellent R-values to fight conductive heat transfer - the direct flow of heat through matter.

#### VAPOR BARRIER

Aluminum foil is impervious to moisture and air currents. As such, *The Insulator* is an ideal convection and vapor barrier.

#### CONSTANT LAYER DAMPING MATERIAL

*The Insulator's* aluminum foil layers reflect sound back toward its source. It's fiber pad absorbs any penetrating sound waves and reduces vibration. Both combine to make *The Insulator* an excellent **ACOUSTIC SOUND BARRIER**.

For best performance results and maximum service life, we recommend using **Sticky Stuff Spray Adhesive™** to apply **THE INSULATOR™** to surfaces and **INSUL-TAPE™** to seal seams.

Description	Part No.
Sticky Stuff Spray Adhesive™, 16 fl. oz.	07700
INSUL-TAPE™, 30 ft. Roll	07705

\*All kits are pre-cut, pre-sewn, complete, and ready to install with adhesives and instructions. Headliners are included unless otherwise specified. \* Specify Model of Tractor-Combine when ordering.

Manufacturers of Original Agri-Cab Liners

## QUIETER CABS CAN PREVENT HEARING LOSS

Have you ever noticed how your hearing is affected by the constant howl of the engine, hydraulics, and other tractor functions? It's a proven fact that prolonged exposure to tractor noise can result in permanent hearing loss. A U.S. Health Service Study found that **farmers** show a higher incidence of hearing loss than people in other professions. A farmer working inside a sound-insulated tractor cab is exposed to about 85 decibels. At this level, there is little threat of hearing damage for most people. In older, uninsulated tractors, the noise level could exceed 100 decibels, and cause hearing loss in less than eight hours of exposure! If your old acoustical insulation is gone, sound waves keep bouncing from wall to wall because the foam no longer absorbs them. By replacing your acoustical cab lining, you will lower the high-pitched frequencies of tractor noises that can cause permanent damage to your hearing. In older tractors, even if the vinyl is still on the walls, after 10-15 years, dirt and debris will harden and deteriorate the foam behind the vinyl and much of the sound-guard quality is lost.

**Fehr Cab Interiors** produces pre-cut interior kits to quiet the cab and restore the original insulation qualities, sound suppression and comfort levels. This is necessary for maintaining tractors of today - it not only makes them cleaner and safer vehicles but also adds to their resale value.

**Fehr** cab kits make the job of reapplying the new insulation much easier for you by finishing all the necessary sewing, laminating, contouring and forming to ensure easier installation. We take special care to make sure the product satisfies customers with quality custom fit and **original** color and finished appearance. Any kit offered by **Fehr Cab Interiors** can be custom cut in colors other than those previously available from the manufacturer. These kits include all **original** parts, installation instructions, and adhesives. **Fehr Cab Interiors** also takes special care to insure the kits fit as they install many of these kits themselves. We can cut interior insulation pieces to custom-fit **any cab**. After careful measuring, send us your specific dimensions or simply ship your old cab parts to us and we will reproduce them.

Renew your tractor and combine cab liners  
Restore back to original materials and sound suppression  
Kits are all pre-cut, pre-formed and sewn to fit like original  
Custom colors available in any pre-cut kit  
Kits include glue and instructions  
Quality guaranteed  
Pre-cut floormats  
Big savings over company prices

**Quality Interior Kits  
Custom made by hand  
to fit any tractor or  
combine cab.**

### Available For:

- Allis Chalmers
- Case
- Case IH
- Ford
- International
- John Deere
- Hiniker Cab
- Massey Ferguson
- New Idea Uni Harvester
- Steiger
- Versatile
- White
- Year-A-Round

### Also Available:

- Pre-Cut Floormats
- Door Seals
